

Kadzhik Vardanyan

UX/UI & Product Designer

I design interfaces for iGaming, fintech and products with a lot of data. I run a project end to end: user flows, a design system, desktop and mobile screens and a working prototype. I use AI tools every day and test layouts against real data.

PROJECTS

ORBIT — Online casino with a crash game — 2024–2026

UX/UI & Product Designer · International startup · iGaming

What I did: Building an iGaming product with an online casino and a crash game. Designing the user experience and interfaces for desktop and mobile.

Results: 8 screens designed for desktop and mobile. Design system: 19 components and 46 colour variables. 50 icons and 26 illustrations. Visual assets for 5 ad campaigns.

Vesta — Mobile bank — 2024–2025

UX/UI & Product Designer · FinTech

What I did: Designing the concept of a mobile banking app focused on convenient money transfers, transparent financial operations and handling edge cases.

Results: 18 screens designed and 7 edge states. An interactive prototype demonstrating the transfer flow. Alternative scenarios and error-handling logic worked out. Documentation of UX hypotheses, design decisions and analytics events.

Nyxa — Crypto dashboard, web and mobile — 2025–2026

UX/UI & Product Designer · International startup · FinTech / Crypto

What I did: Building a crypto dashboard for investors, focused on visualising financial data, tracking markets and managing an investment portfolio.

Results: 8 screens designed. 30+ components, 48 icons and 12 illustrations. 51 colour variables and 17 text styles. A system of 29 primitives and 22 semantic tokens with usage rules and CSS syntax.

Arena + Arena Live — B2B web app and a widget on live data — 2025

UX/UI & Product Designer · Local Russian startup · SportsTech / B2B SaaS

What I did: Building a B2B platform for a sports school with a registry, application processing and an analytics dashboard. A further track was an interface widget with real-time sports data.

Results: 8 screens and states designed. A library of 17 components and 36 icons. A widget system of 43 primitives and 27 semantic tokens. A design system used across two interfaces. A live sports data widget covering 12 leagues.

SKILLS

Product & UX. User jobs and JTBD, flows, information architecture and every state of a screen: empty, loading, error, long content.

Design systems. Figma variables with light and dark modes, tokens that export to code, components with variants and clear usage rules.

Data-heavy UI. Dashboards, registries and tables with filters, sorting and bulk actions, multi-step forms where nobody gets lost.

Prototypes & handoff. Clickable prototypes in Figma and working ones in HTML/CSS/JS, specs and tokens a developer can build from without guessing.

TOOLS

Figma · Variables & Tokens · Auto Layout · Prototyping · FigJam · Design systems · User flows · UX research · HTML / CSS / JS · Higgsfield AI · GPT Image · Kling · Notion
